

How to Clean Your Poms at Home

Items you will need

- Pom-poms
- Hair dryer
- Cloth rag
- Scissors
- Windex or similar cleaning agent
- Storage bag or vented plastic container
- Water

Step 1

Read the sticker attached to the plastic handle of the pom-poms to determine what materials were used in their manufacture. Looking at the pom-poms also will aid in determining the materials used -- plastic pom-poms are one color per strand and holographic pom-poms are iridescent and smoother to the touch than plastic.

Step 2

Spray a cloth rag with Windex or a similar cleaning agent designed for glass. Hold plastic pom-poms loosely in one hand and gently smooth the rag along a small grouping of strands.

Step 3

Dampen a cloth rag with a small amount of water to clean holographic pom-poms. Hold strands loosely in one hand and smooth the damp rag along the strands.

Step 4

Turn a hair dryer on low heat or cold. Hold the hair dryer at least one foot away from the pom-poms and dry. Turn the pom-poms around often and shake while drying.
